Otto

A sales intelligence tool for Comvoy. It sits on live market data across our 12-state territory and lets you ask questions in plain English. Instead of pulling reports or digging through spreadsheets, you talk to it and get answers.

WHAT OTTO DOES

Chat

Ask anything about dealers, territories, or market data in plain English. Otto pulls live inventory, scores leads, builds briefings, and plans trips — all through conversation.

Map

Every dealer in the network plotted across 12 states. Color-coded by lead score. Click any pin for inventory, penetration, and a full briefing.

Dashboard

Market share, pricing curves, lead pipeline, and Smyrna positioning — all in one view. Filter by state to drill into any territory.

Trips

Build and manage multi-day rep routes. Dealers are ranked by lead score so every stop is the highest-value target in the area.

TRY IT

Open **gdmotley1.github.io/comvoy** and click New Chat. Paste either of these to see Otto in action.

Plan a rep's week

Scores every dealer in range, builds a routed trip plan, and flags at-risk accounts.

> *Kenneth is in Dallas this week. Build him a 3-day trip hitting the highest-value dealers in Texas.*

Follow up: "Skip the Penske stops and only show hot leads."

Prep for a call

Full dealer briefing in seconds — inventory, pricing, builder mix, Smyrna penetration, and Google reviews.

> *I have a call with Randy Marion Chevrolet in Mooresville NC tomorrow. Give me everything I need to know.*

Follow up: "They also have Randy Marion Ford nearby. Pull that briefing too so I can pitch both stores."

WHAT THE DATA UNLOCKS OVER TIME

Otto scrapes the entire Comvoy network weekly and tracks every VIN and price point. As the dataset grows, it opens up analysis that doesn't exist anywhere else in this industry:

Sales Velocity

Which body types move fastest, by state and dealer. How long units sit. Where demand outpaces supply.

Pricing Trends

Price movement by segment. Which dealers are raising prices vs cutting them. Market rate shifts by quarter.

Inventory Cycles

Seasonal buying patterns by state and body type. When dealers restock, draw down, and how to time outreach.

Competitive Movement

Which builders are gaining or losing share. Dealer-level brand switching. Early warning signals.

YOUR INPUT NEEDED

Metrics

What KPIs matter most? What should we be measuring that we aren't today?

Territory Structure

How should we assign and prioritize territories? Fixed states, dynamic zones, account-based.

Automation

What should trigger without being asked? At-risk alerts, weekly digests, CRM sync.

Competitive Depth

How granular do we want to go? Builder tracking, pricing forecasts, displacement alerts.

The tool gets sharper the more we define what we're optimizing for. Looking forward to your direction on it.
